Johnson. 1616.

*A Cœlestiall Figure of the Middle of  
the Eclipse of the Moone, the  
17. of August, at three a  
clocke in the morning.  
1616.*

A Prognostication.

¶ Of the Eclipse of the Moone,  
the 17. August. 1616.

There will appeare an Eclipse of the  
Moone the 17. day of August, 1616.

The beginning whereof shall happen  
at one a Clocke, and 15. minutes in the  
morning: And the Middle will be at three  
a clocke, and the ende at foure a clocke  
and 45. minutes in the morning.

The continuance from the beginning  
to the ending will bee three houres, and  
one halfe: The pointes Eclipsed will be  
13.6.28.1.

Of which behold the Celestiall figure  
before, on the other side of the leafe.  
finde no other Eclipses in our Horizon this  
yeare: And therefore I will let passe those  
in other Countreyes.

A de  
mea  
Arro

e, *A Description of the foure quar-*  
*ters of this yeare of our*  
*Lord God 1616.*  
*Of Winter.*

☉. in ♍, ♎, ♏.

**W**Inter beginneth according to our  
*English Account* in the yeare last  
 past, 1615. the 18. day of *Decem-*  
*ber*, when the Sunne entred the first minute  
*Capricornus*, making the shortest day and  
 longest night in the yeare: which Quarter  
 endureth vntill the 9. of March, whilest the  
 Sunne maketh his course in ♍. ♎. and ♏.  
 Which quarter of his Naturall inclination  
 colde and moyste, the colde preuaileth  
 ouer moysture, the Sunne being in *Capri-*  
*cornus*, and it is equally colde and moyste:  
 the Sunne in *Aquarius*, and the Sunne in  
*Pisces*, it is more moyste then colde; the  
 Ayre is darkened, and mens bodyes waxe  
 ainte.

In this Quarter vse more quantitie of  
 meate then drinke, and exercise the bodie  
 strongly; vse sweet wines and meates hot

B 3

and

## A Prognostication

and drie : Flesh and Fish fryed, fewe sweet smelling things, and warme drinke : Haue a speciall regarde of the morning and evening colde, and keepe the head and feet warme and drye. —————

And for so much as I finde *Saturne* haue most dignities in the *Figure Celestia* at the entrance of the Sunne into *♊.* and bee Lorde of the *Figure* placed in the sixth House in *Aries*, I gather according to the Iudgement of *Origanus*, that this *Quarties* will be much inclined to colde extraordinary, with Frost and Snow, and many sudden Stormes and Tempests at Sea, daungerous for Nauigation, with likelyhood of Earth-quakes in diuers places, and as *Haly* sayeth, *Tempore frigoris auget frigus, &c.*

And according to *Haly*, in 6. *In significatione Arietis, erit damnum in Bestijs, & similia*

---

## Of Winter.

The Sickneses and diseases of this Quarter, are like to be these, or such like, many Chronicall and long diseases, as the Tye-sick, Consumption, Tooth-ache, Rewme, Pleurisy, Hoarsnesse, Coughes, and Feauers-quaintaines, with diseases in the Head and eyes, and much trouble to olde folkes, &c.

## Of the Spring.

☉. in ♋. 8. II.

**T**He *Spring* beginneth this yeare on the tenth day of *March*, at the entring of the Sunne into the first minute of *Aquaries*, making the Dayes and Nights æquall; Which time beeing come, eate lesse, and drinke more: It is good to take *Physicke*, to Purge, and to Bathe, and to shake off Winter Surfets;

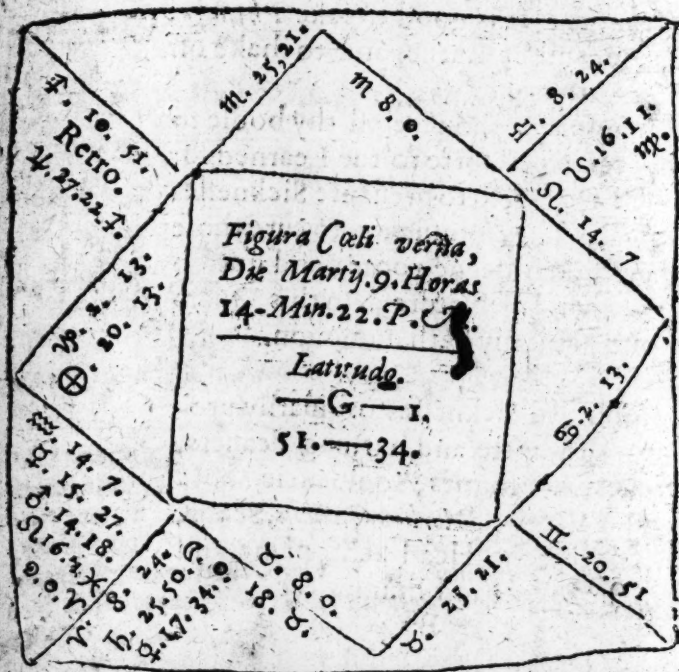

Wherefore if thou feelst thy bodie to bee oppressed, Resorte to the Learned for Counsell: as well to preuente Sickneses and diseases like to ensue, as to cure those that haue taken deepe roote, and gotten the vpper hand of Nature. In this Quarter Bloud naturally hath dominion.

Diseases and Sickneses ordinarily proceeding, are hotte and burning Feauers, Plewresies, Apostumes, Squinancie, hote malignant Vlcers, *Morbus Gallicus*, Scabs, Itche, Tooth-ache, Head-ache, paine and Ache in the Ioynts and limmes, &c.

# A Prognostication

Here followeth a Celestiall Figure of  
the Heauens, at the Entrance of the Sunne  
into the first Minute of Aries, March  
the 9. Day, Houres, 14. Minutes  
22. after Noone.

Of the Fortitudes and Debilities of the  
Planets : and how to finde the Lorde  
of the Vernall-quarter of this  
yeare, 1616. accor-  
ding to Origanus.

	Fortitudes and of the						Debilities Planets.					
	h. 4. 8. 12. 1. 5. 9.						h. 4. 8. 12. 1. 5. 9.

Jupiter is here adiudged to be Lorde of this Quarter of  
this yeare, hauing 34. dignities : and Mars partner, hauing  
23. dignities : Jupiter placed in Sagittarius, in the twelfth  
house Retrograde : and Mars placed in the second house,  
with the Dragons-head. Mercurie vnoztunate in coniu-  
ction of Saturne, in the third house, beeing Lorde of the sixte  
house,

nuatur Epidimicæ infirmitates ac Pestes: Aer enim salubrior efficitur, ab æuro, seu vento Septentrionali, quem mouet Iupiter, &c. quia Retrogradus est, præstat hæc quæ diximus, non sincera, ac minora sona, & aliquando Intemperiem, &c.

## Of Sommer.

☉ in ♋. ♀. ♀.

Sommer according to our account, be-  
ginneeth this yeare vpon the xi. of Iune,  
1616. making the longest day and shor-  
test night in the yeare. The body now  
desires more drinke then meate, whereby  
dangerous surfers are bred by meanes of  
excessiue drinking, the body being ouer  
much hote, vse meate and drinke, sharpe  
and colde, but not so cold that the estate  
of the body bee altered by them. Yellow  
Choller hath dominion; therefore beware  
of Bleeding and purging in the Canicular  
dayes; any wound then taken is dange-  
rous, and hard to cure; and because som-  
mer is hote and drie, let your dyet be cold  
and moyste. The diseases of this quarter  
are yellow laundies, small poxe, hote bur-  
ning agues, pustules, scabbes, ytch, tetteres,  
blisters, and sores in the mouth, with flux-  
es, and immoderate purgations & sweates.

The disposition of the weather this  
Quar-

### A Prognostication.

Quarter is like to proue somewhat tempestuous, with much suddaine fall of raine and showers, more then vsuall.

---

### *Of Autumne or Haruest.*

☉ In ♌, ♍, ♎.

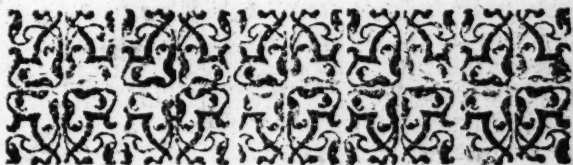

**A**utumne or Haruest quarter beginneth this yeare the xii. day of September, at the Sunnes entrance into Libra, making the Autumnall Equinoctiall; the dayes decreasing, and the nights increasing, the weather waxeth colde with Northerne winds. In this quarter vse more quantity of meate, and dryer then before: drink lesse, but sweeter drinkes: eschew the morning and euening colde, beware ouermuch eating offruites, lest theyr euill iuyce by the distemperature of the ayre, both corrupt the whole body: Autumne is colde and drie; therefore let your dyet bee hote and moyst.

The Diseases subiect to this quarter are reumes, hoarsnes, coughes, poses, consumptions, quartaine Agues, tooth-ache, paines in the ioynts and limbs, with inflammation, &c.

This

Johnſon. 1616.

This quarter is like to proue ſomewhat wet in the beginning, and in the middle windy; and the latter part ſomewhat extraordinary colde with froſt and ſnow.

Predictions of Dearth and Plentie,  
gathered from the Diſpoſition  
of the foure quarters or ſeaſons  
of the yeate.

**I**f there happen much moiſture in the Spring, it ſheweth putrifaction of the fruites of the earth, and ſmall in quantity, and abundance of unprofitable earbes and weedes: for the budding and ſlowing trees, and other thinges growing out of the earth are hindered and hurt, by the over much moiſture, by reaſon the colde of winter is not yet taken away, which hurteth the ſeeds, and hindereth the growing.

If there happen many euident ſignes of heate in the Spring, the earth and trees will ſoone yeeld forth their fruits and bloſſoms: and the fruites of the Spring, as Cherryes, and Strawberries will ſoone be ripe, and if they bee not gathered before they be full ripe, eſpecially Cherries, they will bring forth wormes, eſpecially in hote Countries: but  
this

## A Prognostication.

this neuer happeneth with vs in England, but in hotter Countries very often: A hotte spring maketh Roses appeare quickly, befoze the time, and those not much sweet nor profitable: a fayze hote spring and vnprofitable.

If there be many signes of cold and drought, & there chance to fall some frosts about the full Moone in the end of the spring, there will bee small store of fruite that yeare, and wine and nuts very scarce.

If the spring bee very drie, and not extreame hote, it signifies small store of fruites, but very good, and corne peradventure will bee scarce, if the spring proue very colde, there will bee small store of fruites and rosemary, which will ripen very slow, and often fall downe befoze they be ripe.

---

## Iudgement from the Sommer.

If there be signes of abundance of raine in Sommer, it will putrifie and rot the fruites of the earth, and there will be no great store of corne, and many diseases will then raigne.

If the summer proue extraordinary drie, it signifies scarcety of corne: but it will bee very good: for the fruits of sommer will bee the more healthful: Fishes will then die by reason of the corruption of the waters, and there will then raigne many sharpe diseases and sicknesses.

If summer exceede in heate, there will bee manie diseases, and great plenty of sommer fruites and wines shall then be very pure and good. If sommer proue very colde, the yeare will bee very healthful, and

And fruites plenty, but somewhat of a rosey substance.

## Coniectures from Autumne.

If there happen much moisture in Autumne, it spoyleth wines, by reason it rottes the Grapes, and causeth the wines to bee bad, by reason of the quantity of water that is gathered with the grapes and mingled with the wine: so that next spring there is expected bad wines.

If the latter part of Autumne prove very moist, the yeare folloving there will be scarcety of corne: If extreame drie in the first part, it foresheweth scarcety of graine.

If Autumne prove extreame hote, it signifyeth plenty of diseases and sicknesses.

If extreame colde, it spoyleth the fruites of the earth in their quantity, smell and taste.

## Signes of plenty or dearth, taken from the Winter quarter.

A Cold and drie winter is the best signe of plenty: Winter extraordinary colde: killeth fruit, trees, especially those that delight in a hote ground, as is the Pomegranate, the Figge, the Pomegranate and Lemon, and other of like nature,

A hote and moist Winter is very pestilentiall and full of diseases, and unwholesome, and hurteth corne,

## A Prognostication.

come, for ouer much moysture rotteth the seed, indifferent quantity of snow in Autumne quarter, maketh the earth fruitfull, and bringeth forth abundance of all frutes of the earth : for the snow heateth the earth, and killeth wormes : any extraordinary temperature in any quarter of the yeare is an euil signe.

---

## Of Windes.

**A** Great quantity of winds is hurtful to fruits and seedes of the earth : little winds stirring all the yeare is a signe of the pestilence.

---

## Iudgements of sicknesses and diseases from the Spring.

**T**he spring time tempestuous & drie, with store of North winds, threatneth diseases & death to olde people, and abortion to women with child, and to those that are of nature flegmatike : bloody sties in the summer following, and looseness of the belly, and distillation of sweeme from the head into the belly, with griefe of the inward parts of the body, and to the cholerike complexion, inflammation of the eyes.

The spring ouer moyst, breedeth diuers diseases in the summer following, as burning fevers, frenzies, and Impostumations, fevers hard to cure.

The spring very colde, with much raine, and South winds, increaseth putrefaction, & breedeth pestilentiall fevers.

## Coniectures of Diseases, taken from the Sommer Quarter.

**S**ommer hote and drie, bringeth forth diuers diseases and sicknesses, as burning feuers & paine in the head, Sommer hote and moist, bringeth putrifaction with diseases proceeding there from, as burning feuers, fluxes and sicknesses procuring much sweate.

A colde sommer is good for the Collicke, if the humour giueth way and purgeth.

Sommer drie with plenty of North winds, is good for the flegmaticke.

## Signes of Sicknes from Au- tunne Quarter.

**A**utunne of all times of the yeare, is the most pernicious & dangerous, because then raigne sharpe sicknesses & diseases, hurtfull coughes in the beginning: North winds and drie weather hurte the Chollerike of complexion, & bringeth them to bleared eyes and feuers, long and sharpe with binding and stopping of the breast, with a quantity of blacke Chollar flowing: but it is good for women and flegmaticke persons.

A moyst Autunne is conuenient and healthfull to mens bodies, but if it be ouer moyst from the beginning to the Ende, it filleth and stoppeth the head very much, and in the Winter following, ingendreth many Coughes, hoarsenesse and vehemēt distillations, with paines in the head and eyes.

C

Iudge.

## A Prognostication.

### Iudgements taken from the disposition of the Winter Quarter.

**I**f Winter keepeth the ordinary temperature, it signifieth no great sicknesses or diseases, but only paine in the head, hoarsenesse, coughes, which are the Symptomates of fulnesse of the head. If North winds and drie, it prouoketh Coughes, retention of the bowels, disflurie, and paine in the breast and stomacke.

If Winter bee ouer moyst, it ingendzeth plentie of watry humours, and diseases proceeding therfrom as the dropsie and such like: and because I find Mars to beare some rulle with Iupiter in the Spring, I feare some sharpe diseases in sommer, because Mars is placed in Pilces, a watry signe, signifying some peccenttall fevers, or sweating sickness: These Coniectures I haue noted out of Origanus, and for the inclination of the ayre, according to the most forcible aspect of the Planets, I haue noted in the Kalender, wishing all men to take it in good part, and not to account them as the Oracles of Apollo: but yet to marke the inclination of the weather, many dayes before and after the said aspects, and to iudge it accordingly.

For nothing hath made me more considerate in this arte, then the obseruation of the weather, which is so much scoffed at, & especially in this age, by Gerualde Launcie, who hath written most ridiculously and scoffingly against Prognostications, going about to pull downe the Signes quite out of the Heavens, making more account of the signes hanged vp in tavernes, which by so many learned men in all ages hath

hath beene byholden against all detractors, as who  
that reade the defence of iudiciall Astrology, writ-  
ten by our learned Countreiman Sir Christopher  
Heydon, shall see more at large: this Dauncy saith  
for the Churches sake, I presume to correct, let any  
man of understanding see what he hath corrected, I  
can see nothing: but Guillye & Peckinge with two  
shepheards hookes, wanting a Moderator until he  
come: and for their Disputation, it is more fitter  
for sheepe then for Astrology, he sayth, Almanackes  
ought to be set forth negligently, and I thinke no  
man that readeth his scoffing Pamphlet, but will  
say, he hath performed his part negligently inough:  
I know not what extraordinary apparitions ap-  
peared at his Natiuity, as he sayth: but I am sure  
hee hath caused an extraordinary apparition to ap-  
peare in my iudgement to the world: wherein is  
nothing containned worth the reading, eyther with  
Astrology, or against it, but bare ignorant scoffing,  
as he sayth Origanus affirmes two Eclipses in the  
East, it were as easie for him to saigne more when  
as it is manifestly known to those exercised in this  
Arte, that there is nothing more certaine in this  
arte then the true knowledge of the Eclipses of the  
Sunne and Moone. And thus much I thought  
good to write, because his booke came to my hand  
as I was writing this my Prognostication, ho-  
ping some man of greater knowledge then my selfe,  
will take occasion to answer him, especially, if any  
thing were in it worth answering.

A Prognostication.

Heere followeth the quarterlie  
disposition of the weather, for e-  
uerie quarter of the Moone, accor-  
ding to the most forcible af-  
fects of the Planets this  
yeare, 1616.

Of Ianuary.

**L**ast quarter the first day, at two a clocke and  
33. minutes in the morning, tempestuous and  
colde weather, with frost and snow.

New Moone the 8. day at 9. a clocke, and 35. mi-  
nutes at Night, colde and seasonable weather.

First quarter the 15. day at 4. a clocke, and 42.  
minutes after noone, colde and darke Ayze.

Full Moone the 23. day at 6. a clocke, & 26. mi-  
nutes at night, frost and thicke colde ayze.

Last quarter, the last day at 4. a clocke, and 16,  
minutes at Night, winds and snow.

Of February.

**N**ew Moone the 7. day, at 7. a clocke and 52.  
minutes in the morning, wind & thosozes.

First quarter the 14. day, at 8. a clocke, 22.  
minutes in the morning, a manifest alteration of the  
ayze

## Johnson, 1616.

ayze with wet and cold.

Full Moone the 22. day at one a clocke after noone, windy and stormes, *apertio portarum ad ventos.*

### Of March.

**L**ast quarter the first day at 2. a clocke, 15. minutes in the morning, windy weather.

New Moone the 7. day at 6. a clocke, 10. minutes at night very fayre weather, with some seasonable raine.

First quarter the 15. day, at 2. a clocke in the morning, winde, raine, and cold thicke weather.

Full Moone the 23. day, at 4 a clocke, & 52. minutes in the morning, strong winds and raine.

Last quarter the 30. day at 9. a clocke, 18. minutes before Moone, a distemperate windy quarter.

### Of Aprill.

**N**ew Moone the 6. day, at 4. a clocke, and 42 minutes in the morning, colde raine.

First quarter the 13. day at 8. a clocke, 32. minutes at night, windy and drye.

Full Moone the 21. day at 5. a clocke, and 36 minutes after noone, windy and stormes of hayle of raine.

Last quarter, the 28. day, at 3. a clocke, and 10. minutes afternoone, seasonable warme weather.

## A Prognostication,

### Of May.

**N**EW MOONE the 5. day at 4. a clocke after noon,  
the weather windy, and colde raine, a frost in  
May.

First quarter the 13. day, at 2. a clocke, 47. minutes  
after noone, tempestuous weather and raine.

Full MOONE the 21. day at 3. a clocke, 36. minutes  
in the morning boze of raine.

Last quarter, the 26. day, at 8. a clocke, 40. mi-  
nutes at night, saye swarme weather.

### Of Iune.

**N**EW MOONE the 4. day, at 4. a clocke, 11. mi-  
nutes in the morning, winde and tempests of  
thunder.

First quarter the 12. day, at 7. a clocke, 36. mi-  
nutes in the morning, very swarme weather.

Full MOONE the 19. day, 18. minutes before  
MOONE a very good temperature of the ayre.

Last quarter the 26. day at 3. a clocke in the mor-  
ning, winds and showers.
